

Product Change Notification 1/29/03

C-3190 and C-3190-P Crown Victoria Slide Out Trunk Tray

REASON FOR CHANGE: Ford Motor Company announced in Jan. '03 recommended guidelines for mounting police equipment in the trunk of the Crown Victoria Police Interceptor. These guidelines as well as a mounting template can be view at www.cvpi.com .

The recommendations state that not more than 10 lbs. should be supported by the “seat strainer” and not more than 14 lbs. should be supported by the “package shelf”. The seat strainer is the vertical bulkhead behind the rear upright seat cushion and the “package shelf” is the rear deck above the spare tire.

Since the C-3190 (driver side) and C-3190-P (passenger side) trays use these surfaces as an anchoring points, we have added a support bracket to the side of the tray to relieve any weight which may previously been placed on these anchoring points.

COST AND DELIVERY: All shipments effective 1/29/03 will include this extra weight support bracket at no additional cost. Customers who have already purchased these products and want to retrofit may order P/N C-3190-RETRO-D (driver side) and or C-3190-RETRO-P (passenger side) for \$15.00 each, End User.

INSTALLATION: The installation of these brackets requires no holes to be drilled and should require approx 15 minutes per vehicle.

The decision to retrofit these trays is purely at the discretion of the department using these products. Havis Shields makes no claims to interpret the recommendations set forth at the www.cvpi.com website.
